

TOP WAYS TO MINIMIZE DISEASE TRANSMISSION DURING PATIENT PREPARATION

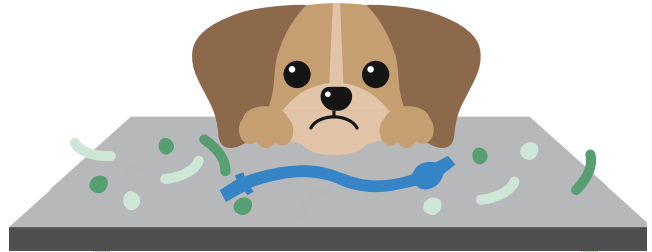

1

Do not touch patient eyes with eye lube container.

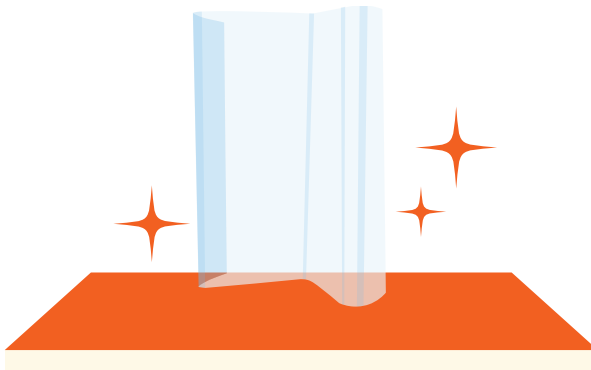

4

Do not contaminate endotracheal tubes prior to insertion.

2

Disinfect tables and *v-trays* and change towels between patients.

5

Disinfect pulse oximeter sensors between patients.

3

Immediately prior to use, apply scrub and solution to gauze in hand.

6

Wash, sanitize, or use gloves between patients.
