

- Your dog has been prescribed Meloxicam, which is a non-steroidal anti-inflammatory drug (NSAID). It will provide pain control and help to decrease swelling.
 - Please follow all label directions, and give the medication with a meal.
 - Do not give this medication if your dog is already on an NSAID or any form of steroid.
 - Possible side effects include loss of appetite, vomiting, diarrhea, dark stools, and/or decreased activity.
 - If you see any of these side effects, stop giving the medication and contact us at **(855) 434-9285**. This helpline is open 24 hours.
