

Your pet was found to be nauseous while staying with us. Nausea is a common occurrence after surgery involving anesthesia, and usually resolves on its own. Please feed smaller amounts of your pet's normal food for a day or so until their system returns to normal. We have given your pet one or more of the following treatments to help with nausea and hydration:

- _____ mL Cerenia (anti-nausea)
- _____ mL Famotidine (anti-acid)
- _____ mL subcutaneous fluids (for hydration)

If vomiting continues longer than 12-24 hours, or if you have any questions, please call **(828) 252-2079** (local office hours) to schedule a recheck, or **(855) 434-9285** (after-hours helpline).
