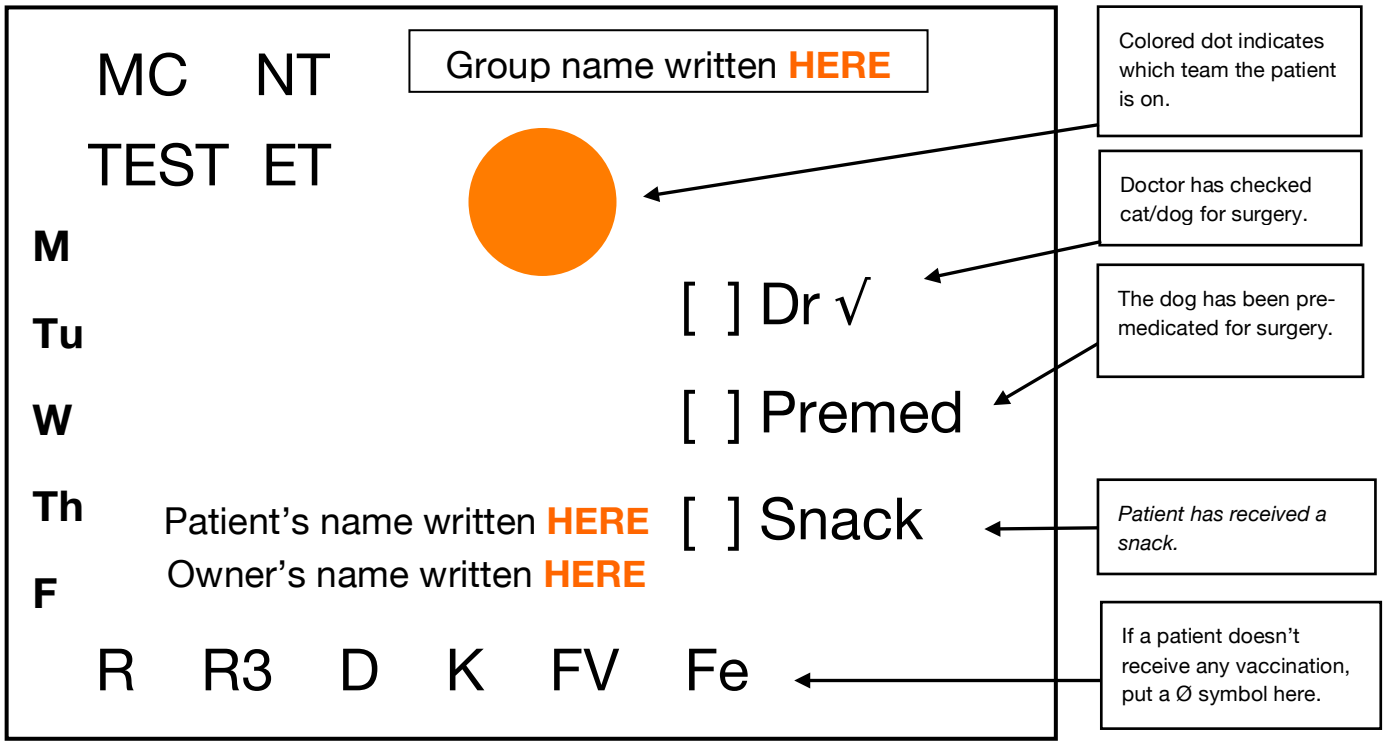
INTAKE QUESTIONS

1. **Has your pet been normal lately?**
   This helps us to know if there are any changes in health (for example, the owner states they've noticed changes in frequency in urination, which may indicate a bladder infection) that should be addressed at a full-service hospital prior to surgery.
2. **Does your pet have any medical conditions or health issues?**
   For example, diarrhea or vomiting in a newly acquired puppy could indicate parvovirus, or coughing/sneezing may indicate an infectious disease. It is also important to know of chronic conditions such as seizures/epilepsy, etc., to make the best decision for the pet.
3. **Is your pet on any medications, or has your pet had any injections in the last 30 days?**
   This question may provide additional information on the pet's overall health, and may guide how we address pain medications.
4. **Did your pet have a small breakfast this morning (so that we may give a small snack)?**
   Small meals (about ¼ to ⅓ the size of the normal meal) the morning prior to surgery actually decrease the chance of regurgitation, which is a potential side effect of anesthesia that can have serious consequences.



MC	Microchip	D	Canine Distemper/Parvo Vaccine
NT	Nail Trim	K	Bordetella (Kennel Cough) Vaccine
TEST	Heartworm or FeLV/FIV Combo Test	FV	Feline Distemper/Upper Respiratory Vaccine
ET	Ear Tip	Fe	Feline Leukemia Vaccine
R	Rabies Vaccine (A viral disease present in the saliva of infected animals and transmitted through bite wounds, almost always fatal. The vaccination is required by law.)		
R3	Rabies 3-year Vaccine
