

## **Diluting Bleach for Disinfection**

### **Basic Practices:**

- Prepare fresh diluted bleach solutions daily or when solution is contaminated by organic material. Discard any solution left from the previous day.
- Use the appropriate dilution for the disinfection task:
  - » 1:32 for general disinfection
  - >> 1:10 to inactivate ringworm
- Tightly close containers that hold bleach and diluted bleach solutions.
- Protect the diluted bleach solution from light.

## To prepare a solution:

1. Assemble an empty container of the required size with 5.25% bleach, and water.

**Note:** The percent concentration of bleach (sodium hypochlorite) is printed on the product label.

- 2. Add the correct volume of bleach to the empty container.
- 3. Add water to the container until the required volume is reached.

Example: Add 1/2 cup 5.25% bleach to a gallon container, and then add water to the container until the solution reaches the 1 gallon level.

# **Diluting Bleach for Disinfection**

#### 1:32 Dilution: Use for General Disinfection

(also Parvovirus, Panleukopenia, Calicivirus)

This Volume of Water	Requires this Volume of 5.25% Bleach	
1 gallon	1/2 cup	
24 ounces	4-1/2 teaspoons	
16 ounces	1 tablespoon	
8 ounces	1-1/2 teaspoons	

### 1:10 Dilution: Use for Disinfection If Ringworm May Be Present

This Volume of Water Requires this Volume of 5.25%		
1 gallon	1-1/2 cups	
24 ounces	1/4 cup + 1-1/2 teaspoons	
16 ounces	3 tablespoons	
8 ounces	4-1/2 teaspoons	

### **Liquid Volumes**

This Volume	Equals	In Milliliters
1 gallon	4 quarts OR 8 pints OR 16 cups OR 128 ounces	3840 ml
1 quart	2 pints OR 4 cups OR 32 ounces	960 ml
1 pint	2 cups OR 16 ounces	480 ml
1 cup	8 ounces	240 ml
1 ounce	2 tablespoons	30 ml
1 tablespoon	3 teaspoons	15 ml
1/2 tablespoon	1-1/2 teaspoons	7.5 ml
